

The National Oceanic and Atmospheric Administration (NOAA) will host a community workshop on the Earth Prediction Innovation Center (EPIC).

Congress has instructed NOAA to establish the EPIC to accelerate community-developed scientific and technological enhancements into the operational applications for earth system forecasting and prediction. NOAA is seeking participation from the broader weather enterprise (public, private, and academic) and high-performance computing experts to inform the planning, development, and strategy of the EPIC.

Earth Prediction Innovation Center (EPIC)

Community Workshop

Boulder, CO

August 6-8, 2019
